Docket No.: PF-0208-1 DIV

11. (Once Amended.) A pharmaceutical composition comprising [a substantially purified human IMP-2 protein having an amino acid sequence of SEQ ID NO:1] an effective amount of a polypeptide of claim 1 in conjunction with a suitable pharmaceutical carrier.

- 12. (Once Amended.) A purified antibody which binds specifically to [the]  $\underline{a}$  polypeptide of claim 1.
- 13. (Once Amended.) A purified agonist which specifically binds to and modulates the activity of [the] a polypeptide of claim 1.
- **14.** (Once Amended.) A purified antagonist which specifically binds to and modulates the activity of [the] <u>a</u> polypeptide of claim 1.
- 15. (Once Amended.) A pharmaceutical composition comprising [the] <u>an</u> antagonist of claim 14 in conjunction with a suitable pharmaceutical carrier.
- 16. (Once Amended.) A method for treating liver disease comprising administering to a subject in need of such treatment an effective amount of [the] <u>a</u> pharmaceutical composition of claim [13] <u>15</u>.
- 17. (Once Amended.) A method for detection of [polynucleotides] <u>a polynucleotide</u> encoding [human IMP-2] <u>a polypeptide comprising SEQ ID NO:1</u> in a biological sample, <u>said</u> <u>method</u> comprising the steps of:
- a) hybridizing [the polynucleotide of claim 2] an isolated and purified polynucleotide which is complementary to a polynucleotide encoding a polypeptide comprising SEQ ID NO:1 to nucleic acid material of a biological sample[, the]; and
- b) detecting said hybridization complex, wherein the presence of said complex correlates with the presence of a polynucleotide encoding [human IMP-2] a polypeptide comprising SEQ
